

# Group Manager

By Readibots

Dynamically create, manage, and synchronize groups across any environment

## Synchronize groups governed by customizable policies

### Identity Foundation

Integrate and amalgamate Identity sources beyond Entra ID allowing policies based on any attribute

### Seamless Integration

Integrate multiple feeds into a single repository

### Intuitive Policy Management

Create/manage groups with your policies enabling dynamic group management

### Extensible

Infinite customization and integration with enterprise applications and infrastructure

### Cost Effective

Leverage your existing IT staff's PowerShell skills for customization and implementation

**READI Group Manager transcends conventional limitations, offering a sophisticated user-friendly solution for dynamic group management across any environment. Our platform leverages the power of Agile Identity to streamline the creation, management, and synchronization of groups, governed by customizable policies rather than static assignments.**

Managing access rights through groups has been a cornerstone approach for IT administration which includes managing groups across diverse environments, with seamless one or two-way membership synchronization and dynamic group creation based on specific rules. Requirements extend beyond the capabilities of traditional IAM solutions and native tools provided by platforms like Microsoft Entra ID.

The need for dynamic, policy-driven group management has never been more critical.

In a landscape where efficiency, flexibility, and scalability are paramount, READI Group Manager stands out as the premier choice for organizations seeking to overcome group management challenges in multi-cloud, on-prem, and diverse IT environments. Our solution not only addresses the immediate needs of dynamic group management but also lays the foundation for a comprehensive identity automation strategy.

### Properties

Name

Regional department

Description

Regional department

Privileged

TRUE

Persist on update

TRUE

### Add systems

Add the systems this rule will generate groups for, and the type of groups to create

System	Group type
Entra HQ	Security
M365 Global	Unified
AD Field	Group

### Rule pattern

Type the pattern for your naming convention

Pattern

Grp Region Department

### Query builder

Define a query to dynamically define membership. Pattern properties cannot be removed

Property	Operator	Value(s)
Region	None	Type to add values ...
Department	Not equals	Leadership add more values ...

### Explicit membership (Global)

Set explicitly user or groups to include or exclude to affect all groups

Include

James Aldove Harvey Keller add more values ...

Exclude

Roger Roger Jean Luc Picard add more values ...

### Results

type to search ...

New (8)

- GrpNoramSales
- GrpNoramMarketing
- GrpNoramTechnology
- GrpEMEASales
- GrpEMEAMarketing
- GrpEMEATEchnology

### Policy for Dynamic Group Creation

User-friendly interface for policies that dynamically create and maintain groups.

### Streamlined Group Management Across Environments

Simplify the complex task of managing user groups across various platforms / applications, including Workday, on-premise Active Directory, and cloud-based services like Entra ID, AWS, and GCP. Eliminate the need for multiple disparate tools, providing a single, unified solution for all group management needs.

### Accessible Metadata for Policy Decisions

Amalgamate data from any application/environment for policy creation and decision-making.

### Dynamic Group Synchronization

Create dynamic groups based on customizable policies ensuring group memberships are always current and reflect organizational changes.

### Enhanced Security and Compliance

Centralized and automated group management ensures memberships are accurately maintained based on organizational policies which enhances security and compliance; and reduces the risk of unauthorized access.

### Granular Delegation of Administrative Functions

Enable precise control over who can manage groups and access sensitive information. This feature is crucial for maintaining security and operational integrity.

### Streamlines Service Desk Requests

Access requests, like "please add me to this group," are handled automatically. READI Group Manager automates this process, enabling immediate updates to group memberships directly through the service desk, bypassing IT staff intervention

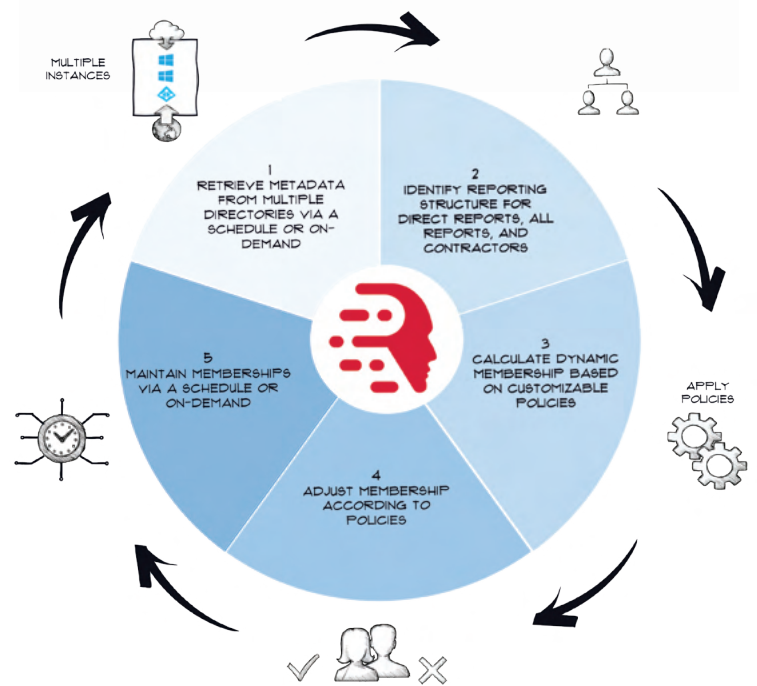

### Enhanced Compliance with Detailed Audit Trails

Exhaustive audit trail for each user and group, enabling clear visibility into how and when access changes occur creating a smoother audit process.

### Rogue Administration Detection

Proactively monitors for unauthorized group changes, alerting on rogue administration ensuring quick identification and remediation of out-of-band modifications.

**READI Group Manager not only addresses the immediate needs of dynamic group management but also lays the foundation for a comprehensive identity automation strategy. Built on the robust READI Identity Platform, our solution simplifies group management and enables advanced customization for data transformation and exception handling. This approach ensures a flexible, responsive solution that adapts to your organization's evolving needs.**

### About Readibots

Readibots is an industry leader in Agile Identity. Readibots changes the game from a traditional waterfall approach by building Identity on an automation platform. Readibots allows organizations to focus on specific pain points with a start anywhere and go anywhere agile approach.
