

Connector Studio

Build Powerful. Flexible. Simple. Connectors

Powerful, Flexible and Simple

With Connector Studio, you're in control—creating sustainable, cost-effective connectors that scale with your business.

Custom Connectors Made Simple

Connector Studio simplifies creating and managing connectors for enterprise systems, enabling you to adapt quickly to business and technology changes without the complexity and risks of traditional compiled code. Create connectors that seamlessly bridge Identity solutions with ITSM systems or automate data processes where integration was previously difficult or impossible. With READI, you gain access to the underlying PowerShell code, allowing you to extend the connector's functionality beyond the user interface.

With Connector Studio, you're no longer dependent on third-party vendors or their release schedules. The power to customize integrations is entirely in your hands, letting you design solutions tailored to your specific requirements while adapting to your organization's evolving needs and infrastructure.

Connector Simplicity

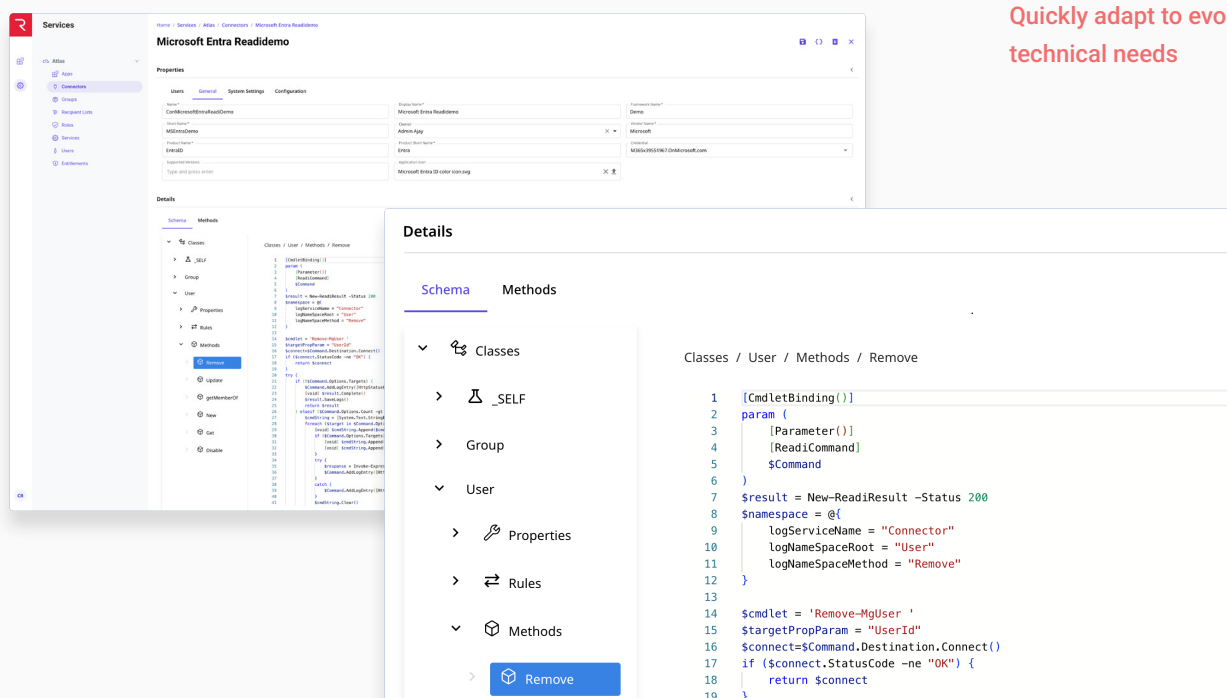

Built on PowerShell for seamless IT integration

Enable iterative changes for agile development

Easily integrate applications without needing source APIs

Leverage your existing skills to extend functionality

Quickly adapt to evolving business and technical needs

Key Features & Benefits

Powerfully Simple Interface:

- Easily create or modify connectors
- Assign schema mappings and apply predefined transformations
- Perform data cleanup and combine multiple data sources
- Make data-driven decisions and set properties
- Automate existing processes without modifying underlying systems

Built on PowerShell – The Language of IT:

- Leverage PowerShell's flexibility, cmdlets, and integration with .NET libraries to connect to a wide range of data sources (e.g., databases, web services, files, etc.)
- Modify connectors iteratively without needing compiled code or long development cycles
- Quickly adjust code without requiring expensive resources or external developers

End-to-End Process Automation:

- Connector Studio, combined with Bot Studio, enables you to automate processes and integrate tasks (bots) into a powerful, customized solution. For more details, check out our Bot Studio Solution Overview.
- READI captures a full audit trail of changes, providing transparency and accountability across all integrations.

Common Use Cases

Combine data from multiple applications/CSV files

Organize ODBC/JDBC data into a single view for your IGA

Build connectors for homegrown applications

Integrate data cleanup into your connector

Modify data for consistency when combining from multiple applications

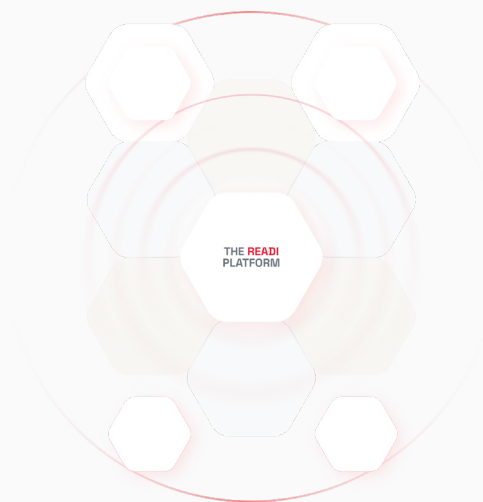

The READI Architecture

The READI Platform centralizes and governs your connectors and turns them into reusable, repeatable components.

Execution of connectors is tightly controlled through flexible security policies and every change made to a connector is captured in an audit log.

The READI Platform core features bring the power to Connector Studio.

About READI

READI is an industry leader in Agile Identity. READI changes the game from a traditional waterfall approach by building identity on an automation platform. READI allows organizations to focus on specific pain points with a start anywhere and go anywhere agile approach. READI has the tools to transform manual processes into efficient and secure automations. An enterprise-integrated solution delivered incrementally for maximum value.
