

READI + SailPoint

Complete Connectivity & Automation

Connectors

Many applications unique to your organization require manual intervention to integrate with SailPoint due to a lack of pre-built connectors. READI bridges this gap by connecting to uncommon and custom data sources, automating manual processes, and directly loading data into SailPoint.

READI connects to these uncommon and unique data sources including custom applications allowing you to automate manual processing by reading the data directly and automatically loading the data into SailPoint. READI is not limited to using SCIM or API's, we use a variety of tools including command-line, custom DLLs, database access, RPA and more for the most difficult connections. With [READI Connector Studio](#), you can quickly build custom connectors using your existing skillset.

Beyond data extraction, READI updates records based on changes in SailPoint, ensuring real-time synchronization during attestation and certification.

By integrating all applications into the governance process, READI enhances visibility and enables instant bidirectional updates. It also standardizes data by pulling from multiple sources and normalizing it as needed.

Purpose-Built for Automation & Governance

READI is designed for automation, while SailPoint excels in governance. Together, they provide seamless connectivity and automation.

READI complements SailPoint by:

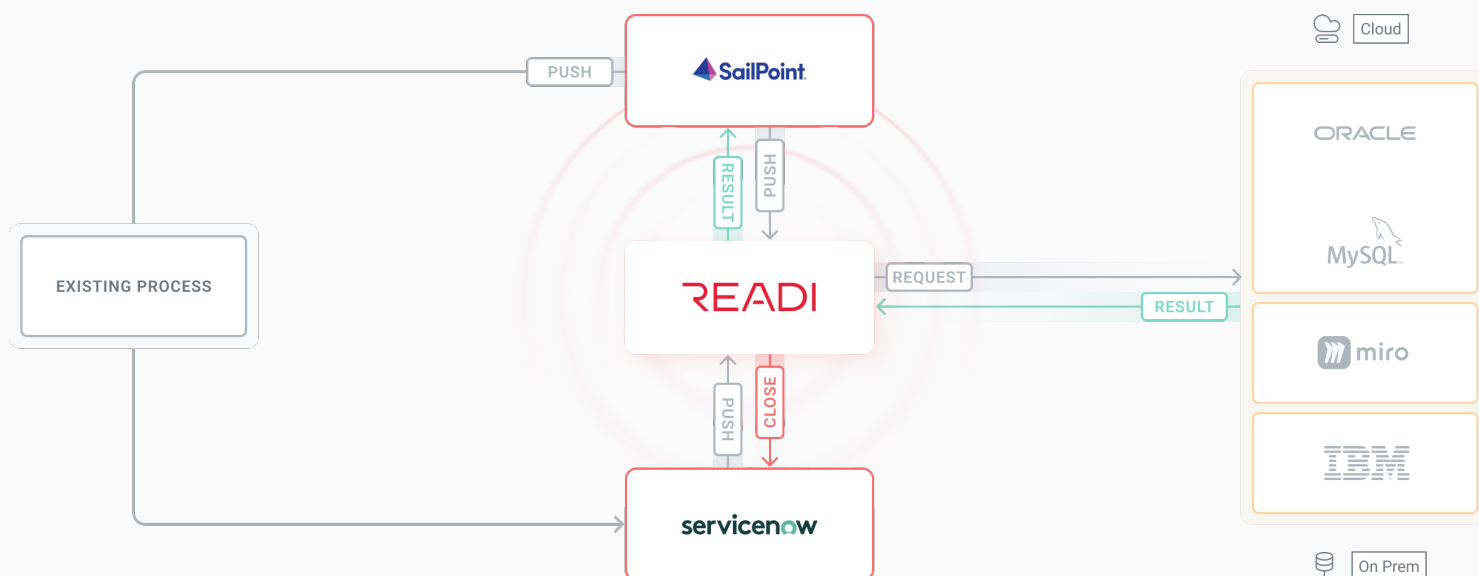

ETL processing for disconnected applications

Automating complex workflows

Eliminating bottlenecks with scalable automation

Custom actions and remediation beyond traditional IAM operations

Full auditing of every action to ensure compliance and regulatory success

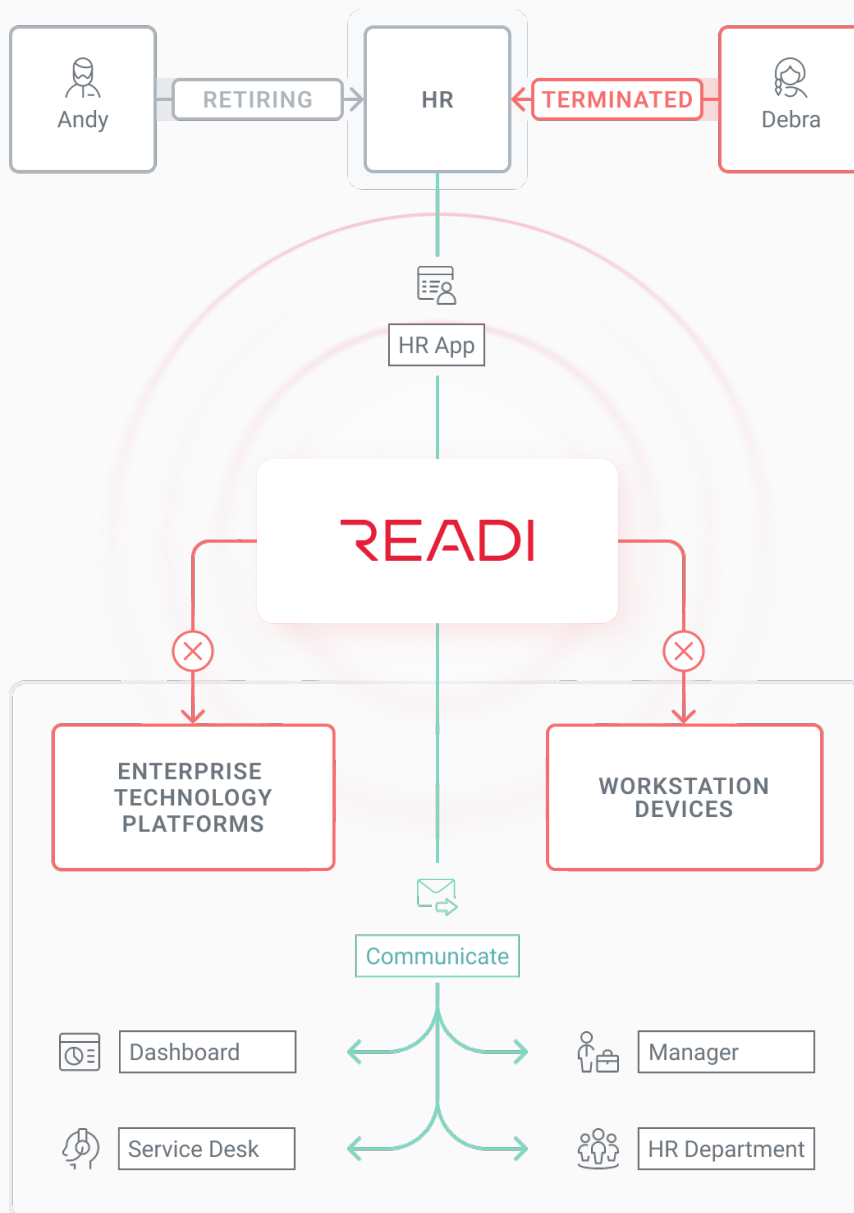

Automation

READI automates identity-related processes and extends beyond governance—for example, setting out-of-office reminders, archiving/wiping hard drives, and reclaiming licenses.

SailPoint follows best practices, which works well for process re-engineering, but frequently we see processes that cannot be changed. READI offers flexibility by allowing access to the underlying code for full automation. Most tasks can be automated through an intuitive UI, eliminating the need for coding—while still providing the option if required.

SailPoint only governs what it can see. READI provides visibility

About SailPoint

SailPoint equips the modern enterprise to seamlessly manage and secure access to applications and data through the lens of identity – at speed and scale. As a category leader, we continuously reinvent identity security as the foundation of the secure enterprise. SailPoint delivers a unified, intelligent, extensible platform built to defend against today's dynamic, identity-centric cyber threats while enhancing productivity and efficiency. SailPoint helps many of the world's most complex, sophisticated enterprises create a secure technology ecosystem that fuels business transformation.

About READI

READI is an industry leader in Agile Identity. READI changes the game from a traditional waterfall approach by building identity on an automation platform. READI allows organizations to focus on specific pain points with a start anywhere and go anywhere agile approach. READI has the tools to transform manual processes into efficient and secure automations. An enterprise-integrated solution delivered incrementally for maximum value.
