

Bot Studio

Centralized. Reusable. Governed Automation.

Push the Limits of Identity Automation

Bot Studio lets you automate tasks by extending or creating your own identity solutions.

The Developer Hub for Agile Identity

Bot Studio lets you automate edge cases, help desk tools, self-service helpers, and repetitive tasks—or even build full applications.

It's a developer environment powered by the READI Platform and built on Agile Identity principles: fast deployment, adaptability, and immediate ROI using your existing resources.

Bot Studio uses the skillset your team already possesses: PowerShell. That means your team is up and running quickly with no learning curve. We turn your Bots built with PowerShell into **PowerShell for the Enterprise** by making them **centralized, reusable, and governed**. The vast PowerShell community provides prebuilt scripts that can quickly be imported into the READI Platform and turned into Bots. You can also create your own Bots.

Automate Challenging or Edge Use Cases

Existing identity solutions are built for the masses and are typically unable to address challenges with complex or edge use cases without changing your existing processes. READI allows you to solve your business challenges without changing your process. You can easily solve the use cases, and this is just the beginning.

Account Lockouts

Automate password resets, user validation, and ticket fulfillment—reducing Help Desk load and frustration.

Mergers & Acquisitions

Gain a unified identity view across directories without changing your existing architecture or processes.

Multi-Tenant Administration

Manage all your tenants through a single, centralized admin experience—streamlined and secure.

Ticket Fulfillment

Automate repetitive tickets with workflows, commentary, and full audit trails—no manual work needed.

Data Cleansing

Fix inconsistent identity data automatically to ensure smooth and successful IGA deployments.

Event Triage

Trigger Bots from SIEM alerts to execute workflows and eliminate the need for IT tickets.

Provisioning and Entitlements

Automate access to disconnected systems and sync updates back into your IGA—end to end.

Bulk Operations

Bots update user data and roles in bulk, syncing across systems with full audit logging.

Resource Cleanup

Automatically identify and archive stale accounts—move, encrypt, or disable them with full control.

Highlights

Automate Beyond the Basics.

Handle edge cases, self-service, and full app automation with ease.

Powered by Agile Identity Principles.

Rapid deployment and adaptability deliver fast, measurable business value.

Enterprise-Ready PowerShell Automation.

Use existing scripts to build centralized, governed identity Bots.

How It Works

The READI platform is the easiest way to automate your entire identity lifecycle. Whether your current identity program focuses on your IGA, ITSM, or a combination of the two, Readibots can propel you to real identity automation at least 10 times faster than either of them can alone. Here's how it works:

1

Register your IGA/ITSM in the READI platform.

2

Configure your IGA/ITSM to send /receive events.

3

Forward events from your IGA, or tickets from your ITSM.

4

Atomic TaskBots execute the task and verify completion.

5

Readibots notifies the sender (IGA or ITSM) of completion.

READI is an amazing platform for our organization. We've been able to build many amazing solutions in quite a few different areas of IT. The folks at READI couldn't be greater to work with!"

— Andrew Jackson, IT Architect | KC

The READI Architecture

The READI Platform centralizes and governs your Bots and turns them into reusable, repeatable components. Every Bot change is logged, and the execution is tracked with audit trails for oversight. The READI Platform core features bring the power to Bot Studio.
